PROFESSIONAL SUMMARY

- **Senior full-stack engineer** with 6 years of experience, hands-on across the stack from architecture through production deployment and on-call operation, with the last 5 years working remotely with US-based Agile/Scrum teams across FinTech, GovTech, and SaaS sectors.
- **Backend and distributed systems:** Django, FastAPI, and Node.js (NestJS) services behind REST and GraphQL APIs; event-driven architectures with worker pools and message brokers processing 10k+ events/day; ETL pipelines ingesting ~500k rows/day; PostgreSQL query optimization and Redis caching taking the highest-traffic endpoints from multi-second to sub-second responses.
- **AI engineering:** ships LLM-powered features in production (API integrations, prompt engineering, RAG pipelines, MCP servers with FastMCP, agent orchestration, eval design) and works AI-natively, running parallel agent workflows on git worktrees with goal-driven agent loops and curated code review, supported by a custom-built suite of AI development tools (skills and evals).
- **Cloud and DevOps:** Azure, GCP and AWS with Terraform, Docker, and Kubernetes. Infrastructure as code for automated, replicable and secure environments, backed by reliable CI/CD (GitHub Actions, Jenkins) and observability (Grafana, Prometheus).
- **Frontend architecture:** micro-frontends, monorepos, design systems, and shared tooling across web and native, from complex legacy migrations to greenfield platforms.
- **Hands-on technical leadership:** tech lead on a 5–8 engineer team, owning architecture decisions with the PO and client and unblocking engineers while continuing to ship production code. Sets shared engineering standards and tooling adopted by 40+ engineers across all project teams. Creator and maintainer of open-source packages used across company projects.

TECHNICAL SKILLS

Programming: JavaScript/TypeScript, Python, SQL, HTML5, CSS3, Bash

Backend & Data: Django, FastAPI, Node.js, NestJS, REST API Design, GraphQL, Microservices, Event-Driven Architecture, System Design, PostgreSQL (query optimization, indexing), Redis, RabbitMQ, Kafka, Celery, WebSockets, Elasticsearch, ETL Pipelines, PySpark, Pandas, pytest, Jest

Cloud & DevOps: Azure, GCP, AWS, Digital Ocean, Terraform, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins, GitOps), Observability (Grafana, Prometheus), Ansible, Nginx, OAuth2/JWT

AI & LLM Engineering: LLM API Integrations, Prompt Engineering, RAG Pipelines, Embeddings & Vector Search, MCP Servers (FastMCP), Agent Orchestration, LLM Evals, LangChain, AI-Assisted Development Tooling

Frontend: React, Next.js, React Native, Vue, React Query, Redux, Zustand, Vite, Webpack, Web Components, Micro Frontends, Monorepos, Tailwind, Accessibility (WCAG), Web Performance (Core Web Vitals), React Testing Library, Playwright, Cypress

Practices: Agile/Scrum, Code Review, Technical Mentorship, Cross-functional Collaboration

Languages: Portuguese (native), English (fluent), French (fluent)

EXPERIENCE

Senior Software Engineer (remote) — The SilverLogic

March 2023 – Present

Florida, US-based software development firm delivering custom software for start-ups and enterprises.

- **Designed an Event-Driven Email Pipeline on Azure:** Microsoft Graph subscriptions publishing through Event Grid to a Celery worker pool (RabbitMQ broker) on a closed client network, bridged via an Azure Relay WebSocket connection, ingesting and classifying 10k+ events/day with retries and dead-letter queues.
- **Shipped LLM-Powered Features in Production:** LLM API integrations with prompt engineering, RAG pipelines, MCP servers built with FastMCP, and agent orchestration, backed by systematic eval design to measure and improve output quality.
- **Built ETL Pipelines** ingesting ~500k rows/day into a cloud data lake, with automated cleansing and secure delivery of curated datasets to backend and analytics services.
- **Optimized Django and PostgreSQL Performance**, eliminating N+1 ORM queries and adding composite indexes and Redis caching on the highest-traffic endpoints, taking the slowest views from multi-second loads to sub-second responses.
- **Own Production Operations and Infrastructure Security** for delivery-team services: define SLOs and alerting with Grafana and Prometheus, maintain runbooks, lead incident response, and enforce least-privilege RBAC across Azure and GCP resources with audit logging via GCP OS Login.
- **Shipped Typed NestJS APIs and Server-Side Rendered Next.js Applications**, owned from design through deployment.
- **Drive AI-Assisted Development Company-Wide:** created a suite of AI coding-assistant skills and evals encoding app patterns and conventions, standardizing AI tooling usage and raising delivery consistency across all project teams.
- **Hands-On Tech Lead on a 5–8 Engineer Team:** own architecture decisions alongside the PO and client, run code review, and unblock engineers while continuing to ship production features. Set shared engineering standards and tooling — service patterns, component libraries, and AI-assisted development conventions — adopted by 40+ engineers across all project teams.
- **Open-Source Contributor and Maintainer:** active contributor to an open-source Django backend framework used as the foundation for company projects; created and maintain its companion NPM package suite (React/TypeScript) — github.com/silverlogic.

Technologies: Python, Django, FastAPI, NestJS, PostgreSQL, Redis, Celery, RabbitMQ, LangChain, MCP (FastMCP), RAG, GraphQL, REST, WebSockets, RBAC, Azure (Event Grid, Relay), AWS, GCP, Terraform, Docker, Kubernetes, GitHub Actions, Grafana, Prometheus, Ansible, Nginx, Microservices, Distributed Systems, Bash, TypeScript, React, Next.js

Full-Stack Software Engineer (remote) — The SilverLogic

July 2021 – March 2023

- **Optimized Backend Query Performance with Redis**, caching expensive database queries behind the heaviest API endpoints and async task workloads and taking response times from multi-second to milliseconds.
- **Architected a Modern Micro-Frontend Platform** for a med spa franchise, migrating a legacy codebase to a monorepo with micro frontends, enabling parallel development across multiple teams and supporting the franchise's expansion to 20+ stores and 30,000+ active users.
- **Optimized DevOps Infrastructure**, cutting CI/CD pipeline times from 25 minutes to 4 minutes by modernizing Docker-based builds, Jenkins pipeline configs and package management.
- **Introduced a Monorepo Strategy** for web (React) and native (React Native) apps, streamlining shared logic across platforms and paving the way for TSL's expansion into cross-platform projects.
- **Founded Company-Wide Engineering Knowledge-Sharing Initiatives:** workshops, technical debates, and cross-project shared components, which grew into a standing practice group that still sets technical direction today.

Technologies: Python, Django, PostgreSQL, Redis, TypeScript, React, React Native, Webpack, Docker, Micro Frontends, Monorepos, NPM & PyPI packages, CI/CD

Software Engineer (remote) — GovPredict

May 2021 – July 2021

GovPredict was a leading SaaS platform that consolidated legislative tracking, stakeholder management, and digital advocacy. The platform operated with teams across the US and Europe, demanded robust and scalable infrastructures to manage large datasets, and was acquired by Quorum in September 2022.

- **Integrated Data Services** involving Ruby on Rails and Elasticsearch, supporting large datasets and requiring advanced caching strategies for improved query performance.
- **Implemented Advanced React Features** to enhance user-facing functionality, ensuring seamless legislative tracking and stakeholder engagement for clients.
- **Collaborated with an International Team**, aligning across multiple time zones to deliver features and resolve technical challenges efficiently.

Technologies: Ruby on Rails, Elasticsearch, Docker, Monorepos (backend & frontend), TypeScript, React

Software Engineer (remote) — SmarttBot

Sep 2020 – May 2021

The company specializes in automated trading bot solutions for the Brazilian stock market, enabling high-volume, algorithmic trading for users and financial institutions.

- **Architected Micro-Frontends** using Docker, NGINX, and Webpack to modernize a legacy application, improving scalability and deployment speed for new features.
- **Developed a Framework-Agnostic Design System** using Web Components, seamlessly integrated across React and Vue projects, ensuring consistent UI/UX at scale.
- **Enhanced User Experience** for the trading bot management platform, serving 2,000+ regular active clients on the SmarttBot platform, with additional reach via a 15M-user banking app.
- **Improved Sales Conversions** by leveraging the new design system during high-traffic periods, contributing to R\$1 million in sales at the end of 2020.

Technologies: JavaScript, TypeScript, GraphQL, Nginx, Docker, React, Vue, Micro Frontends, Webpack, Web Components, Git

EDUCATION

Trybe — Full-Stack Web Development Program · Belo Horizonte, MG

2020 – 2021

École Nationale Supérieure de Chimie de Lille — Exchange student, Materials Science and Engineering · Lille, France

2018 – 2019

Universidade Federal de Minas Gerais — BSc, Metallurgical Engineering · Belo Horizonte, MG

2014 – 2019
